Teacher comments:

Good content, but we need to have better analysis in our speaking! We also need to translate the energy into better style!

Hook

- Exaggerated to say people are dying of heart attacks; but its a clear direction and was put with conviction!

Rebuttal 1: Quality

- Quality will increase because government has more capacity (here we need analysis on what capacity the government has)
- People benefit from better quality of uninterrupted points!
- POI on innovation: good response that it comes with more prices and that makes the innovation less accessible for people; and that they cannot invest in research in the long run because of that!

Argument 1:

- Good analysis on how governments have higher accountability given the people are going to push back!
- POI ans: government has paying responsibility and that the private companies do not care as much. Good point!

Style:

- We need to decrease our pauses in the speech
- We need to have more hand gestures!
- Please try to look at the audience more!

Speaking time: 5:00!
